

## Short Explanation

- 1) Go to <https://aryaphonesupp.onrender.com/>
- 2) On the Home Page, if you are admin of the game create your game session by having a game name and an admin name
- 3) Select the number of rounds and number of trial rounds that you want to play. Trial rounds will not be evaluated.
- 4) After clicking "Continue as Admin" on top you'll see Code. This is your game code, share with the students. Admin | UzH1 | Code: XUB3ND |
- 5) Wait for everyone to arrive in lobby. Then follow the following loop:
- 6) For each round
  - a) Select parameters:
    - i) Distribution related parameters
    - ii) Select sensitivity parameters
    - iii) Select investigation parameters
- 7) **Click to "Apply Settings" button**
- 8) Start round
- 9) Wait for a bit, so that students can enter the values or you can set a timer to make them decide in stress, keep it above a minute at least.
- 10) End round
- 11) There will be changes to the leaderboard, people will see realized demand. Wait for everyone to monitor the last changes, maybe inspect markets behaviour to last changes
- 12) Again, set parameters, start round and end round
- 13) Game ends when there are not remaining rounds left for the game

# Detailed Explanation

# How Standard Game Proceeds

- 1) Go to <https://aryaphonesupp.onrender.com/>
- 2) Create active game as admin

The screenshot shows a web interface for creating a game session as an admin. The title is 'Admin' in bold. Below it is the instruction 'Host a game session and control rounds.' There are four input fields: 'Game Name' with the value 'UzH1', 'Admin Name' with the value 'Admin', 'Number of Rounds' with a dropdown menu showing '5', and 'Trial Rounds' with the value '2'. At the bottom is a blue button labeled 'Continue as Admin →'.

**Admin**

Host a game session and control rounds.

Game Name

UzH1

Admin Name

Admin

Number of Rounds

5

Trial Rounds

2

Continue as Admin →

No codes or password to play a game

Decide on the number of rounds, trials only exist for teaching the game and given an intuition for the market. Not counted in the total score.

- 3) Enter a game name and enter an admin name and select the number of rounds.  
Now **Continue as Admin**

- 4) You are going to see an admin panel, on **top** find the code.

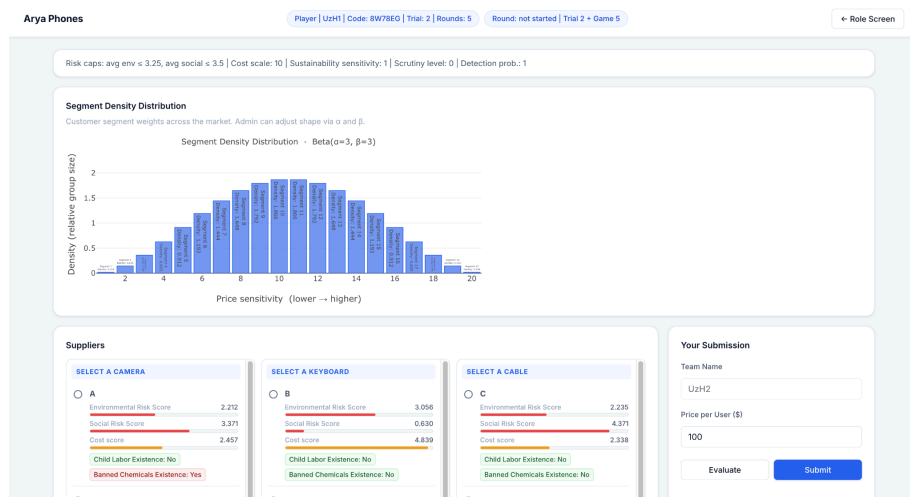

Arya Phones

Admin | UzH1 | Code: 8W78EG | Trial: 2 | Rounds: 5

Round: not started | Trial 2 + Game 5

← Role Screen

- 5) Share the code with the students, they'll access the game using your game code.  
 6) Using the code given to students, they'll be able to access to game session yo are managing. A player's screen should directly look like this, without any admin controls.

- 7) Select the parameter set
- Select distribution parameters alpha and beta, based on beta distribution
  - Select sensitivity parameters:
    - If you increase price sensitivity, society will be more sensitive to higher prices and select cheap things
    - If you increase sustainability sensitivity, market will be more responsible and their utility will be shifted for sustainable products
  - Select investigation parameters:
    - Scrutiny level \* detection probability = probability a problematic instance will be captured
    - A problematic instance is a producer with either banned chemical, child labour or both

The screenshot shows the game interface with the 'SEGMENT DISTRIBUTION' and 'INVESTIGATION' settings. The 'SEGMENT DISTRIBUTION' section has input fields for 'Alpha (α)' (3), 'Beta (β)' (3), 'Price Sensitivity δ' (0.1), and 'Sustainability Sensitivity' (1). The 'INVESTIGATION' section has input fields for 'Scrutiny Level' (0) and 'Detection Prob.' (1). The 'ROUND CONTROLS' section has a 'Timer (sec)' dropdown set to 'Optional', an 'Apply Settings' button, and 'Start Round' and 'Run Match' buttons. The 'ADMIN MODE' section has a checkbox labeled 'Admin also plays' which is checked.

- 8) **“Start Round”** before anyone starts matching.
- 9) Students select the set of suppliers (one from each subcategory), while satisfying the necessary constraints. They can evaluate before submitting to see whether they satisfied the constraints and where they are compared to a small 2 person market.

Can be considered a market consisting of one player and a baseline.

**Suppliers**

**SELECT A CAMERA**

| Supplier | Environmental Risk Score | Social Risk Score | Cost score |
|----------|--------------------------|-------------------|------------|
| A        | 2.212                    | 3.371             | 2.457      |

Child Labor Existence: No  
Banned Chemicals Existence: Yes

**SELECT A KEYBOARD**

| Supplier | Environmental Risk Score | Social Risk Score | Cost score |
|----------|--------------------------|-------------------|------------|
| B        | 3.056                    | 0.830             | 4.839      |

Child Labor Existence: No  
Banned Chemicals Existence: No

**SELECT A CABLE**

| Supplier | Environmental Risk Score | Social Risk Score | Cost score |
|----------|--------------------------|-------------------|------------|
| C        | 2.235                    | 4.371             | 2.338      |

Child Labor Existence: No  
Banned Chemicals Existence: No

**Your Submission**

Team Name: UzH1

Price per User (\$): 100

Evaluate Submit

10) After everyone submits, you can **“Run Match”**

Start Round Run Match

11) How well your round can be seen under here:

**Latest Match Result**

No matching result yet.

| Team | Assigned Users |
|------|----------------|
|------|----------------|

► Per-Segment Market Shares ◀

This graph can be read in the following way:

- > If you perform best on the left tail of the distribution you perform good on low price sensitivity high quality users
- > If you perform best on the right tail of the distribution you perform good on high price sensitivity users, they care more about the price

12) Under leaderboard one can see the cumulative results

Leaderboard
